Subject: command for Cluster Average of Women's employment
Posted by Alanood on Sun, 09 Jul 2023 10:23:36 GMT

Hi

I would greatly appreciate your guidance on calculating the cluster average of women's working
status excluding women's own employment status to avoid in-built association using Stata.
I am applying instrumental variable approach and I need to use this variable as an instrument for
maternal employment.

Thank you
