Subject: Dataset updates and version control

I'm interested in learning more about changes/updates made to existing datasets and how those changes are documented (if at all). For example, I previously downloaded the Afghanistan 2015 individual recode dataset (filename = "AFIR70FL.DTA"). I see online it is now available to download as filename == "AFIR71FL.DTA". Is there a document that notes any changes made to the dataset between version 70 and 71? This question would apply to other previously downloaded datasets also. Thank you.
