Hi Bridgette,

Thanks indeed for the quick response!

I have a follow-up question regarding merging IR and PR files for multiple countries, please.

Should I append the IR files for the target countries, and then append the respective PR files, and then merge the combined IR and PR files using the hv007 and v007 vars? Or should I merge the IR and PR files for each country first, and then append them country-wise?

Thank you.
