Bruno et al:

Thanks so much: you are right, I did mix the two. I have now downloaded the correct Democratic Republic of Congo dataset. Now, I need some assistance in deciphering the table containing the values of A_h and M_h needed for the approximation of level 1 & level 2 weights.

With the help of google translate, I was able to figure out that Table B.3 (columns 4 & 5 gives me the number of census sampled (A_h). But I am unable to figure out the values needed for calculating M_h (average number of households per cluster) for urban and rural areas.

I would appreciate some further assistance from you. The relevant Appendix (B) is attached.

Best, Yawo
