Thank you for your assistance and advice regarding computation of the pregnancy outcomes in the last three years from the Nepal DHS 2022. I was able to process and match it with Table 5.14 in the survey report.

I have a related query and would be grateful for your assistance.

I would like to be able to create a variable in which I can identify:

- 1) The number of women who are either currently married (n=11,155) or living with a partner (n=25) had a pregnancy ending in the past 3 years. The current marital status variable is v501.
- 2) Among these subgroups of women who had an abortion at any time during the same period (past three years).

In other words, I would like to figure out the number of women in addition to the pregnancy outcomes, so I can analyze the data in terms of women but not pregnancies or its outcomes. Hence, I would like to consider women as the unit of analysis

Thank you so much for your time and consideration.
