Hi Liz,

I am having the same trouble calculating exclusive breastfeeding. I reviewed the "Guide..." and I understand the calculation but I don't know which variables yield the numerator. I can't figure out how to get it from M4 or M5. And M39 accounts for just solid or semi-solid foods but not infant formula or other liquids. The calculation of the numerator must be some combination of variables--is there a tab plan that includes those details?

I am using the Indonesia 2012 dataset in SAS.

Thanks,
Jennifer
