An update:

I got Had diarrhoea in past 2 weeks (Children under age 3 years) to match for Bihar using SUDAAN. The code I used is this:

```
proc descript data = mydata2;
 nest v022 v001;
 weight weight;
 var diarrhea; * used variable h11. It is 0 if kids do not have diarrhoea and 1 if they do;
 subpopn hw1 > 0 and b5 = 1; *Indicate kids older than 0 months, but less than 35 months (do not
need to specify) and alive;
Run;
```

However I tried this code for the state for Uttar Pradesh and the results don't match the report for Table 6.17 in the India National Family Health Survey 1998-1999 (NFHS-2) Could anyone explain to me how to get the estimates from the report?
