Dear Team,

I am using the Zambia 2018 DHS dataset for my analysis using the IR file. I have managed to re-produce Table 8.4 in line with 2018 ZDHS report, particularly the stillbirth variable (119) and the Number of pregnancies of 7+ months' duration (9,869).The challenge now is that I am having trouble determining how to limit my sample size to the totpreg7m (9,869), which represents women who had pregnancies that lasted for 7 or months in the five years preceding the survey. Your help will be greatly appreciated. I am using SPSS Version 23 for my analysis.

Thanks and greatly appreciate your feedback in anticipation.

Shadrick
