Following is a response from DHS staff member, Tom Pullum:

The calculation of the immunization rates is complex because of a distinction between whether the information comes from a card or from the mother. There is no simple way to check why you are getting this inconsistency. Please review the Stata code (if you are using Stata) given on our GitHub site: https://github.com/DHSProgram/DHS-Indicators-Stata/blob/master/Chap10_CH/CH_VAC.do
