Following is a response from DHS staff member, Tom Pullum:

Table 8.4 in the pre-DHS8 surveys is tricky. You might think that the "Number of pregnancies of 7+ months duration" would be simply the number of births in the KR file plus the number of stillbirths, but it is not. The attached Stata program "perinatal_mortality_do_16Aug2023.txt" (a text file) combines information in the calendar and the birth history to get all of the numbers in table 8.4. It has a modular structure and several comments to help with the logic. In DHS8 surveys, with pregnancy histories, the table is much easier to construct. The GitHub programs also include table 8.4 but this is a stand-alone program that pre-dates the GitHub version.

Even with the comments, it may be difficult to convert this Stata program to SPSS. I suggest that you try to find the SPSS syntax within the SPSS GitHub programs for chapter 8 (https://github.com/DHSProgram/DHS-Indicators-SPSS/tree/master/Chap08_CM).
