
Subject: Variable Labels for 2019 Senegal SPA data

Hello,

I was working with the 2019 Senegal SPA datasets, specifically, SNFP8ADTSP. I noticed that several variables for family planning do not have labels for the values. For example, of109 (questions & concerns) has values of A, AB, B, and Y. I was wondering how one would go about interpreting these, and if there's another file that I'm missing?

Thanks,
Kevin
