Hello,

Thank you very much for your time. I'm following along this tutorial <https://cran.r-project.org/web/packages/rdhs/vignettes/introduction.html> on basic rdhs regression analysis but struggling with a few parts:

I would like my variables to be related cervical cancer screening which I found were s1423, s1424, s1426 in BJIR and s1323, s1324, and s1326 in MDIR. However, I cannot find the broader variable in the recode file (the example uses hml35 (result of malaria rapid test)? Do you know why these variables are labeled differently in BJIR71FL and MDIR81FL?

Thank you
