Subject: How can I merge the databases? Posted by jcts1809@gmail.com on Mon, 25 Sep 2023 16:24:45 GMT View Forum Message <> Reply to Message

I want to have a database of children's weight (that is, only children aged 0-5 years) with date of birth, all anthropometric variables (weight, height, etc.), breast variables (age, education) and household socioeconomic status variables.

How can I merge the databases and get that information? thank you for your time
