Hi,

I am trying to look at the trends in teenage pregnancy using KDHS 2008-09, 2014 and 2022 and it seems the indicator - Have ever been pregnant was only introduced in 2022. Is that accurate?

What would be the correct interpretation of the indicator "Percentage who have begun child-bearing in KDHS 2008-09 and 2014?"

Thanks in advance!
