The education question on the household questionnaire is "What is the highest grade (NAME) completed. The education on the woman's and man's questionnaire is "What is the highest grade you completed?" In the education tables in the NFHS-5 final report, the standard education levels are, as follows:

No  
schooling  
<5 years  
complete  
5-7 years  
complete  
8-9 years  
complete  
10-11 years  
complete  
12 or more  
years complete  
Don't know/  
missing

No specific question is asked on whether or not the respondent completed college. My understanding is that there is insufficient information on whether or not each respondent completed college.
