Hi Amadou,

I didn't answer your question completely. You can use the following queries to get the lists of:

Indicators: <http://api.dhsprogram.com/rest/dhs/indicators>

Surveys: <http://api.dhsprogram.com/rest/dhs/surveys>

Countries: <http://api.dhsprogram.com/rest/dhs/countries>

add ?f=html if you want to see any of these in a web browser.

You can use these calls in Stata in the same way as the data call.
