Subject: Children's nutritional outcomes and father's characteristics
Posted by fraeus on Fri, 27 Oct 2023 16:25:00 GMT

Hi All. I am wowrking on the attached code. I am analsying nutritional outcomes for children, so stunting, wasting, and underweight. However, when I restrict the sample to only those children eligible for these measurement and I try to check some characteristics of the father (for example land ownership), I only see missing values. The same does not happen for other rounds of the DHS. Do you know why? Is there any non-random choice behind this?

Any help would be much appreciated.
Thank you
