---

I am trying to merge the KR file with the PR file using the codes below

```
use "KEKR8AFL.DTA", clear
drop if b16 == .
duplicates tag v001 v002 b16, gen(dup)
drop if dup!=0
ren (v001 v002 b16) (hv001 hv002 hvidx)
merge 1:1 hv001 hv002 hvidx using "KEPR8AFL.dta"
```

However, a few issues arise

- a) b16 is missing in some case
- b) KR file has some duplicates cases in v001 v002 b16

Any help will be greatly appreciated.

Thanks in advance
