Hi Janet, thank you for your reply. Actually I was using 2010, 2014, and 2019. I lose the fathers on the 2014 and not on the other years with the same code, but reading from the report I noticed that differently from 2010 and 2019, in 2014 they check those children's nutritional indicators in the half sample with women only. Can you confirm that? So, by default, I cannot have information on fathers land ownership, because their information is in the other half of the sample, where children have not been measured in terms of Height-for-weight etc.
