## Subject: KDHS 2022 Gender Based Violence Indicators
Posted by sokiya on Mon, 06 Nov 2023 15:32:19 GMT

I am trying to generate the GBV indicators (most importantly Table 17.9.1, Table 17.9.2, Table 17.11.1, Table 17.11.2 and Table 17.12.1) using the attached do files from DHS GitHub repository and datasets for KDHS 2022. There are couples of areas I will appreciate guidance:
1. It seems to me the indicator Prevalence of intimate partner violence (Experience of any of the specified acts of physical, sexual, psychological/emotional, or economic violence committed by ones current or most recent husband/wife/intimate partner) may not have been captured in any of the do files. I would have expected this to be in the DV_PRTNR.do but this seems not to be the case.
2. Similarly, I have used the do files and am able to reproduce most of the report estimates for women using KDHS 2022 IR dataset. However, I am facing challenges when trying to replicate the same for men. For instance, variable d105 seems not to exist in the MR dataset. Isn't the do file applicable to the MR file or variables are named differently?
Thanks in advance!
