Hello,

I am looking at the KR file of 2011 survey for Uganda. By using the code on this website https://github.com/DHSProgram/DHS-Indicators-Stata/blob/mast er/Chap04_MS/MS_MAR.do I tried to create MAFM variabled based on education regions etc. When I tried to do this previously for the year 2016, it worked. But now it doesn't work. When it gets to line 67 of this code, it turns all the values into missing values. Why could this be? Any help is appreciated.
