Subject: Re: Weighting Posted by Janet-DHS on Thu, 16 Nov 2023 19:36:35 GMT View Forum Message <> Reply to Message

Following is a response from DHS staff member, Tom Pullum:

Weights are cluster-level. They have the same value for every household in a cluster. The average weight is 1, but the values have been multiplied by 1,000,000 just to get rid of a decimal point. We cannot provide support for SPSS but if you google something like "SPSS weights" you will find several websites that give the syntax.

An adjustment for strata is completely different from an adjustment for weights. (There is also an adjustment for clusters, and that is also completely different.) As I said before, the strata in these surveys (v023) are combinations of region (v024) and place of residence (v025). In the 2012 survey, v023 does not have a value label. I have constructed the label for v023 in the 2012 survey and will paste it below. It has 65 values. The label for v023 in the 2017 survey has 68 values. You will have to go through and find why and where there are differences. I suspect that in the 2012 survey there were 3 strata with no cases. You can do a recode of v023 in one (or both) of these surveys to get the labels to match. Let us know if you have other questions.

Value label for v023 (or hv023) in the Indonesia 2012 survey (not given in the data files):

1 aceh urban 2 aceh rural 3 north sumatera urban 4 north sumatera rural 5 west sumatera urban 6 west sumatera rural 7 riau urban 8 riau rural 9 iambi urban 10 jambi rural 11 south sumatera urban 12 south sumatera rural 13 bengkulu urban 14 bengkulu rural 15 lampung urban 16 lampung rural 17 bangka belitung urban 18 bangka belitung rural 19 riau islands urban 20 riau islands rural 21 jakarta urban 22 west java urban 23 west java rural 24 central java urban 25 central java rural 26 yoqyakarta urban
