I am new to DHS data. I am using Swaziland DHS 2006/2007 dataset for man and women the .spss file.

I am having same difficulty in
1) finding the correct recode manual because the one that corresponds to the data set I have has different variables or some missing from the ones in the data set so I think I might be using the wrong one. The manual I'm using is DHS-V.

2) In the same Dataset for Swaziland ( male and Individual) I can not locate a variable the measures number of sexual partners in the past 12 months yet this question was asked in the women questionnaire and man questionnaire. My question is which is this variable in the data set.

Thank you.
