Yes I have located those variables it makes sense now. Yet another follow up is that: I am attempting make the standard deviations of weight-for-height z-scores, weight-for-age z-scores and weight-for-age z scores my explanatory variable, however, I am unsure of whether the HW-5, HW-8 and HW-11 are the relevant variables here or HW70, HW71 and HW72? Can DHS guide me through that? How do I obtain the z-scores
