Thank you very much.

First

Variable V766A/MV766A is number of sexual partners other than Wife/Husband...? My follow up question is: what about those that are not married? OR does the use of wife/husband include "steady sexual partner" whether married or not?

Second

I would like to limit the analysis to ONLY those who had ever had sex. In the DHS report this analysis is limited to those who have had sex in the past 12 months. pp194 & 195.

In other words, I would like to compute multiple sexual partners among those who have ever had sex.

Therefore my last question is: which variable can I use for Ever had sex?

Thank you so much.
