Dear Madam/Sir,

In the 2022 Nepal DHS report, the survey total of some social demographic characteristics for menstrual restrictions differs from what is indicated in the report on page 445. For example survey total for education is 13,066 (3037+4084+5322+623), while the actual total is 13,065. Why is this the case?

Thanks in advance

Geoffrey
