Hello Prof,

Thank you for your help. I've come to a stage in my project where I need to predict outcome variables. However, I'm aware that the survey year varies for each SSA country. I'm utilizing the latest survey year of the DHS. Could you please indicate which file or data from the DHS would assist in predicting my outcomes over time (year) and conducting inequality analysis based on place of residence, maternal education, and wealth index?

Thank you
