Thank you so much. I really appreciate it.

I had another query:

I am using the subpopulation of those who have responded to the domestic violence questions and consented to the HIV biomarker testing. Does this mean I would have to generate a subpopulation for HIV status?

So far, `svyset V021 [pweight=D005], strata(V023) singleunit(centered)` is the stata code I am using. Please let me know and thank you in advance.
