Subject: Extracting contraceptive discontinuation data in Calendar

Hi,

I am analyzing contraceptive discontinuation using Rwanda DHS 2019. I extracted information related to contraceptive discontinuation using calendar but the resulting data indicates a mismatch with variable 359.

First, I filtered out Calendars of women who used any contraceptive in the 5 years that proceeded the survey. Then I recorded episodes of discontinuation for each. But the number of women who didn't discontinue a method don't match with Variable V359.

I attached the Python Notebook of the process.
