Dear Sir/Madam,

I am planning to do a master thesis for global health, a cross sectional analysis examining the association between food insecurity and mental distress (depression and anxiety) using Nepal DHS 2022 data. After I have read through DHS8 guidance manual for statistics but I didn't find how to calculate food insecurity access scale, generalized anxiety disorder(GAD-7) scale for anxiety and patient health questionnaire(PHQ-9) for depression. Could you please help me on that matters?

Sincerely,  
Su Su
