Thank you for your reply.

Yes, these are included in Nepal final DHS report. According to guide to DHS 8 statistics, food insecurity experience scale should be calculated by using hfs1 to hfs8 but didn't mention clearly how to calculate.

In the 2022 NDHS , Table 2.16 shows that 13% of the de jure population experienced moderate or severe food insecurity in the 12 months preceding the survey, while 1% experienced severe food insecurity.

Could you please help me STATA code to calculate food insecurity categories?
