hi NANA,

I'm working on a similar topic as you (distribution of hypertension prevalence in Côte d'Ivoire), i'm also interested in the same variables which i found in IR and MR datasets except BMI and Physical activity.

but i'm having trouble merging the data set.

i will be grateful if you share the steps or codes you used to merge those dataset, also after the merging which variables did you used to see the 'n' in both men and women in the final population.

thanks
