---

Greetings.

I am analyzing the impact of a policy related to child anthropometry. However, since NFHS 4 contains information about children who are born after 2010, I wanted to get information about children born even before that. It would be great if you could help me in merging the two datasets. I know that the caseids are different in the two districts. I thought of merging at the district level but NFHS -3 does not contain a district-level dataset.
