Thank you very much. Now it's clear. I have more questions.

In the data in some cases the birth order is missing, but pregnancy outcome is "born alive". There is also no information on age at death. Can you please explain, what might happened here?

Furthermore, I want to figure out, whether sex selective abortions are present in the data:

If I consider the p30: "abortion" or "miscarriage", sometimes the gender is given (b4 or p4) in pregnancy duration >3 months. Might there be an error? Or can I rely on the information in b4?

Thank you in advance.
