Following is a response from Senior DHS staff member, Tom Pullum:

Are you talking about "quality-adjusted" as in the hierarchy or cascade of effective coverage estimates (see <https://www.countdown2030.org/tools-for-analysis/effective-coverage-data-analysis-center>)? This requires combining DHS and SPA data.

DHS staff have prepared several reports on this topic (for example, <https://www.dhsprogram.com/pubs/pdf/AS84/AS84.pdf>). Your question goes beyond the scope of the user forum, but on our GitHub site you should be able to find the Stata programs prepared for Analytical Study 84, for example.
