Subject: Relative standard errors and design effects across surveys
Posted by DiegoBassani on Wed, 10 Apr 2024 11:50:21 GMT

Hi,

I would like to know if it is possible to compile relative standard errors and design effects for indicators across surveys (or the indicator value and standard error + design effect) via API?

I know this can be done through rdhs, but before we delve into code writing for this, we wanted to check if these can be pulled via API or other ways (besides rdhs) these could be accessed more easily (i.e. without needing to recalculate them)?

Thanks,

Diego
