Dear Sir
I was trying a similar analysis using Indian DHS (NFHS-5). I merged the PR file with the IR file and kept only women interviewed in the domestic module. The variable sh31 asked, "Does any member of this household, including you, have any disability?". So, i am confused how to know whether the women interviewed is disable or any other member of household? Can looking at line number of respondent and disable person work or something else should done here.
