Hello,

In the women sample in NFHS-5,

I am wondering why there is a difference between
-IR: v133   "Education in single years"
and
-PR: sh20   "Highest grade completed" or hv108   "Education completed in single years"

we checked that sh20 is same with hv108.
If all the women sample in IR is inlcuded in PR, is there an equivalent of v133 in the PR files?

What should we use to generate education categories based on their education year in total or highest grade completed?

Thank you always!

Best,
