Hello,

I'm conducting a research using the 2017 Indonesia DHS data and I really need the child's date of birth in days / century day code (CDC) for my analysis (I believe it's B17 and B18). Unfortunately, this information is marked as NA in the dataset. Is there any way I can access this data? It is crucial for my research as i can't progress without it.

Thank you so much for your help.

Regards,
