Great suggestion and thank you. While the NR is more convenient and includes the birth outcomes (live birth, stillbirths, miscarriage, and abortion), the DHS surveys for 2015/16, 2010, and 2004/05 do not have NR files. Therefore, I will need to use the IR file. My concern is clarification on which variable to focus on, especially those with \_01, \_02, \_1, \_2, etc., for each respondent. Let me know if there is a way I can combine those variables with \_01 or \_1.
