Following is a response from Senior DHS staff member, Tom Pullum:

I just looked at Table 10.2. There is a footnote (4) for the Hepatitis B birth dose. In the questionnaire, I found Q513A (on page 486 of the final report). It asks specifically about the timing of the birth dose. None of the other immunizations are specified in terms of days, and for them "months of age=v008-b3" is sufficient.
