Thank you again for the response,

Yes, i also noticed Q513A but i am not sure which variables it reflects into in the dataset, was it H50?

Also i need to confirm about the footnote in the english version of the IDHS2017 report, does it means that the children whose information is based on the mother's report (H50 code 2) received vaccine within 24 hours, and children who have the vaccine recorded in card (H50 code 1) is also considered to have received the vac within 24 hours? Then, how about those who have vaccination marked card but no date stated (H50 code 3)? And what fell into the scope of more than 1 days?

I want to match this part that I highlighted in the Indonesian version of the report (I attached the picture). I'm sorry that I keep asking about this, but it's still not clear to me how to get the percentage in Table 10.2 in the Indonesian version of the IDHS2017 that divides HB0 percentage into 0 days and more than 1 day.
