Following is a response from Senior DHS staff member, Tom Pullum:

In the data files, a dot (".") means that the variable (or question) is not applicable. For example, if there are questions about where, and from whom, and how often, prenatal care was received, but the woman has said she did not have any prenatal care visits, then those questions are not asked. They are NA (not applicable). If you go to the questionnaire you will see it has MANY skips and filters. Actually, DHS surveys generally have very low levels of missing data, in the sense of there being no response to a question that was indeed applicable.

I think the Guide to DHS Statistics (<https://www.dhsprogram.com/Data/Guide-to-DHS-Statistics/index.cfm>) will answer most of your questions. If you are downloading data files from the website, you should see a codebook for each survey giving codes and marginal distributions. Let us know if you do not see that.
