Now that I have received ethics permission to move on with my project, I have more questions... My understanding is that in other datasets, the hearing impairment questions are located in the household member recode (PR) datasets and that this information is located in the household dataset in India.

Is this correct?

Is this information also available in the household member dataset for India (PR)?

If it's only in the household dataset, then essentially the only information we have is that there is hearing loss in (up to 4) household members, but we have no other individual information about those household members in addition to any information in the household dataset.

I'd like to merge this dataset with two other DHS datasets from other countries (India 2019-2021, Nepal 2022 and Pakistan 2017). Is this feasible? Or should I restructure my project to only use Nepal and Pakistan OR Indian datasets?

thanks in advance for any advice.
