Following is a response from Senior DHS staff member, Tom Pullum:

I recommend that you first merge the constructed file with IAPR7EFL.dta, to get relevant covariates, and then yes, you can append the files from the other countries. Note that when you append, the labels will be over-written by the labels from the last file in the append. You may want to do some of your analysis on the separate files.

Let us know if you have any problems. Thanks for using the disability data!
