Hi,
Thank you so much,

Another help: For 2022 Kenya DHS, I am trying to figure out the number of women aged 15-24 who got married before the age of 18 last year and women aged 15-19 who got pregnant last year. So the variables from the individual women's file that I will be using are the following right: v511, v508, v213, v214?

Could you also tell me how to use individual women weights here to calculate weighted estimates?

Best
Ritapriya
