Subject: Harmonization DHS and MICS data, sample weights Posted by euge on Wed, 03 Jul 2024 15:24:08 GMT View Forum Message <> Reply to Message

I am harmonizing data from DHS and MICS surveys. I want to append the datasets and run some descriptive analysis.

I was wondering whether it is possible to use the weights available in MICS and DHS (women weights)? in my understanding they are computed similarly, can you please confirm?
