Dear Tom,

Thank you for your reply, this is very helpful. For indicators which show large differences, like husband/partner's occupation (v705 in the IR file vs. mv717 in the MR file giving male respondent occupation) where v705 shows that all men in couples are working, but mv717 shows that 2.84% of the men in couples are not working, which indicator should I be using for my analysis?

Thank you so much for your help!
