

Dear DHS

Hope you are well.

I am having difficult time replicating nt\_mdd, nt\_mmf, nt\_mad estimated in the  
<https://dhsprogram.com/publications/publication-FR389-DHS-Final-Reports.cfm>

This is Mozambique: Standard DHS, 2022-23, KR Dataset.

More specifically, table 11.8 last three columns to the left of final column (Page 269).

Picture is uploaded. The denominator seems right.

Can you confirm whether DHS is able to replicate those values? Mine is slightly off.

If so, I must something wrong. Here are the steps I took.

After executing [https://github.com/DHSProgram/DHS-Indicators-Stata/blob/master/Chap11\\_NT/DHS8/!NTmain.do](https://github.com/DHSProgram/DHS-Indicators-Stata/blob/master/Chap11_NT/DHS8/!NTmain.do),

I ran [https://github.com/DHSProgram/DHS-Indicators-Stata/blob/master/Chap11\\_NT/DHS8/NT\\_IYCF.do](https://github.com/DHSProgram/DHS-Indicators-Stata/blob/master/Chap11_NT/DHS8/NT_IYCF.do).

The only change I made was to add replace nt\_frtveg=1 if food1==1 in line 264 to add country specific food to the above do file.

This is based on line 213 which is based on variable v414wa. v414wa is amaranth leaves, cacana leaves, spinach, broccoli or moringa leaves

Even without this addition/change, nt\_mdd, nt\_mmf, nt\_mad still does not match. I have attached the outputs.

Can you kindly advise?

Thanks so much.
