Dear DHS

Hope you are well.
I am having difficult time replicating nt_mdd, nt_mmf, nt_mad estimated in the
https://dhsprogram.com/publications/publication-FR389-DHS-Fi nal-Reports.cfm
This is Mozambique: Standard DHS, 2022-23, KR Dataset.
More specifically, table 11.8 last three columns to the left of final column (Page 269).
Picture is uploaded. The denominator seems right.

Can you confirm whether DHS is able to replicate those values? Mine is slightly off.

If so, I must something wrong. Here are the steps I took.
After executing https://github.com/DHSProgram/DHS-Indicators-Stata/blob/mast
er/Chap11_NT/DHS8/!NTmain.do,
I ran https://github.com/DHSProgram/DHS-Indicators-Stata/blob/mast
er/Chap11_NT/DHS8/NT_IYCF.do.
The only change I made was to add replace nt_frtveg=1 if food1==1 in line 264 to add country
specific food to the above do file.
This is based on line 213 which is based on variable v414wa. v414wa is amaranth leaves, cacana
leaves, spinach, broccoli or moringa leaves
Even without this addition/change, nt_mdd, nt_mmf, nt_mad still does not match. I have attached
the outputs.

Can you kindly advise?
Thanks so much.
